Summary

Full-stack engineer with 5+ years shipping and running production software across mobile, backend and infrastructure. One of two engineers behind AncientChat, a Flutter messaging app with 160,000+ users on self-hosted infrastructure. Currently at fforge working with Kwikly, catching and triaging production bugs, running data fixes and building internal engineering tools.

Experience

fforge

Minneapolis, MN · Remote

Support Engineer · Client: Kwikly (US dental staffing marketplace)

Apr 2026 – Present

- Technical link between engineering, ops and customer service: catch and triage production bugs with SQL on two MySQL databases and code review across Rails, iOS and Android; run data fixes.
- Built an engineering-operations dashboard tracking DORA metrics, per-developer throughput and capacity.
- Extended Fixie, an AI triage tool in Slack that uses production data (via MCP) and the codebase to suggest root causes.
- Wrote 30+ runbooks (Confluence) for payments, 2FA, shift sync and HubSpot/ADP issues, so ops resolves them without engineering.

AncientPlus Technology (Ancient Society)

Kumasi, Ghana

Mobile & Backend Engineer (Part-time)

Apr 2026 – Present

- Keep **AncientChat** running at **160,000+ users** and **30,000–40,000 daily actives**; ship features, fixes and releases.
- Run its self-hosted production stack (Supabase, Postgres, nginx, pm2) on Hetzner across several server migrations, most recently moving Postgres onto a dedicated database server.
- Led the move to an offline-first design: SQLite on device as the source of truth, delta sync from Supabase Realtime, and a size-budgeted media cache.
- Designed and built the media-processing pipeline (FFmpeg transcoding) and an image/video moderation service with human review; built FCM push notifications and WhatsApp/SMS OTP routing.

Web & Mobile Developer (Full-time)

May 2024 – Mar 2026

- Rebuilt **AncientChat** from scratch with one other engineer (Flutter, self-hosted Supabase, LiveKit calls), from first commit in Aug 2025 to its late-2025 relaunch.
- Built **Ancient Mall**, a multi-vendor marketplace with four apps (web, buyer, seller, delivery) in Laravel and Flutter, with Paystack, Stripe and Ancient Pay payments.
- Designed and built the company's OAuth2.0 identity provider (Bun, Elysia, Prisma, MongoDB), giving every Ancient Society app a single sign-in.

FusionEdge Technologies (formerly Outstanden Technologies)

Kumasi, Ghana

Co-founder; previously Full-Stack Developer

Feb 2021 – Present

- Led development of a veterinary management system used by clinics in Ghana, which grew into **WaggyVet**, a SaaS practice-management product (scheduling, records, billing, client portal).
- Delivered client websites and SaaS platforms with CI/CD; now shape product and engineering as co-founder.

Freelance

SenditGH: modular Node.js/TypeScript backend serving client, vendor and rider apps 2025–26

Property-Pulse (Loaf Global): Next.js 15 frontend for an AI-powered property platform Jul – Aug 2025

Trucking Management System (Ssessa): multi-tenant fleet and load-tracking MVP in two weeks Sep 2024

MNJ Micro Systems: Angular frontends for management suites and the Agermax booking platform 2023–24

Skills

Languages

Dart, TypeScript, JavaScript, PHP, Go, Python, SQL

Mobile & Web

Flutter, React Native / Expo, React, Next.js, Angular

Backend

Node.js (Express, NestJS), Deno, Laravel, Rails, Django, REST, OAuth2.0, LiveKit

Data & Infra

PostgreSQL, Supabase, MySQL, SQLite, Redis, MongoDB, Docker, nginx, Linux, AWS, GCP

Integrations

Paystack, Stripe, Twilio, Firebase (FCM), HubSpot, ADP, Jira, Confluence, MCP

Education

Diploma, Information Technology · Ghana Communication Technology University · GPA 3.47/4.00 2020 – 2022
